Net::Telnet::Cisco - interact with a Cisco router

```perl
use Net::Telnet::Cisco;

my $session = Net::Telnet::Cisco->new(Host => '123.123.123.123');
$session->login('login', 'password');

# Execute a command
my @output = $session->cmd('show version');
print @output;

# Enable mode
if ($session->enable("enable_password") ) {
    @output = $session->cmd('show privilege');
    print "My privileges: @output\n";
} else {
    warn "Can't enable: " . $session->errmsg;
}

$session->close;
```
